Top 10 Things
that Drive Law Firm and Corporate Legal Automation Specialists Crazy

Black Hills IP

Today's Presenters...

Steve Lundberg

Principal, Chief Innovation Officer
Schwegman Lundberg &
Woessner

Ann McCrackin

President, Black Hills IP
Patent Attorney
Professor of Law

Jill Young

Automation Specialist
Black Hills IP

Doug Knudsen

Senior .NET
Architect/Developer
Black Hills IP

Chris Kinniburgh

IP Software Developer
Black Hills IP

What you will learn today

1. Top "crazy makers" for legal automation specialists

2. Who is responsible?

3. What causes it?

4. Ideas for avoiding/coping with it

01

Too many projects at once with moving priorities

Ever-changing requirements once a project has been started

02

Unrealistic time-frames for project completion

Underestimating complexity of the project

Misunderstanding the Development Lifecycle & Timelines

Lack of consensus on outcomes

Short-term projects objectives that don't fit future requirements

04

Prototype systems

that graduate to production systems

05

Disparate systems

Stitched together without proper interfaces creating fragile workflows and increased time

Black Hills IP

Lack of knowledge of the resources necessary for on-going operations and support of production systems

Processes
have outgrown solutions

08

Disruption of processes
due to reliance on outside vendors or inter-connected systems

Inadequate and less than thorough testing prior to release into production environment

10

Disconnected Communication

between end user, business analyst and the development team resulting in differing expectations and/or suboptimal use

OpenLegalAPI

Home   About   Contact

Black Hills IP

Let's create APIs that are open, accessible and standardized.

OpenLegalAPI is a vendor-agnostic organization calling upon the legal and technology industries to streamline information technology interoperability with a unified ecosystem or "commonly accepted rules" with regards to system integration, specifically API data interchange between various technologies.

API accessibility – on demand or real-time data sharing and speed up the entire automation technology stack from beginning to end. This allows data integration between docketing systems and vendor; the ability to make "real-time" calls to pull and push data between docketing systems and vendor platforms; the ability to upload documents into docketing systems via automation.

API functionality to include:
a. Ability to perform any function with an API that is available to a user through a human user interface.
b. All forms used by worldwide patent offices to be downloadable in XML or JSON format so that any checkbox indications can be determined without use of OCR detection.
