1990s Access / Availability

2000s Autonomy / Asynchronicity

# To Recap and Set the Stage ...

---

- Automation should, at the very least, be better than paper files.
- Automation brings new opportunities ... and new problems.
  - Asynchronous (Emails, Chat, Slack) vs. Synchronous (Meetings, calls)
  - Clients have a variety of their own systems— who will curate?
  - How to capture (bill) the value of automation—or at least avoid taxing yourself
- Digital transformation should unleash the potential of data
  - More than access and “Work From Home”

# Automation that empowers and adds value

Combining Data for processes, viewing & updating from multiple systems

# Example: Office Action Response Work Packet

---

- Integrated with and accessible from a Microsoft Outlook task – can save notes in Outlook task or cloud-accessible work packet folder
- Office Action (OCR'd)
- Draft Shell Response (automatically generated from parsed Office Action)
- Previous Response
- Application As Filed
- Cited references (OCR'd)
- Claim Tracker Spreadsheet
- Examiner Analytics
- Business Strategy Notes
- Flag: priority dates, commonly-owned assignees, related cases, etc.
- Checklist

# Example: Integration with Existing Tools

---

- Docket items propagated from FoundationIP to Microsoft Outlook Tasks
- Can email into the FoundationIP file
  - Response e-mails from auto-filed to file and task
- Can e-mail notes or documentation into the FoundationIP file (FIPfiling)
- Can e-mail references into the Foundation IP file for citation in IDS to USPTO (FIPfiling “Add reference”)
  - Can auto-schedule IDS submissions based on USPTO events to help manage costs
- Can e-mail billing into the FoundationIP file (FIPbilling)
  - Use of Outlook e-mail signatures to get structured data into the FoundationIP file
- Reporting: From SLW ReportOuts E-mail address
  - Can use Outlook rules to filter inbox into a “Report Out” folder
  - Codes associated with communication types can give flexibility to accommodate client procedures

# Analytics Goal: make data-driven decisions

## Problem

- Typical Excel/PDF reports are static
- Data can be stale by the time you use it
- Data is often a snapshot in time, so difficult to see trends over time

0191 11116

## How to get there

- Transform monthly reports into real-time dashboards
- Tools available: Power BI, Tableau

## Benefits

- Fresh data updated as often as needed (automated refresh)
- Dynamic, interactive visualizations (e.g., drill down capability)

## Tactical Steps

- Decide what data is needed
- Combine disparate data sources into one place
- Create visualizations (reports, dashboards)

# Analytics Use Cases

## External: Client Project Examples

- Portfolio Analysis
- Landscape Analytics
- Other analytics...
- Workflow improvement – automate data visualization

## Internal: Firm Management Examples

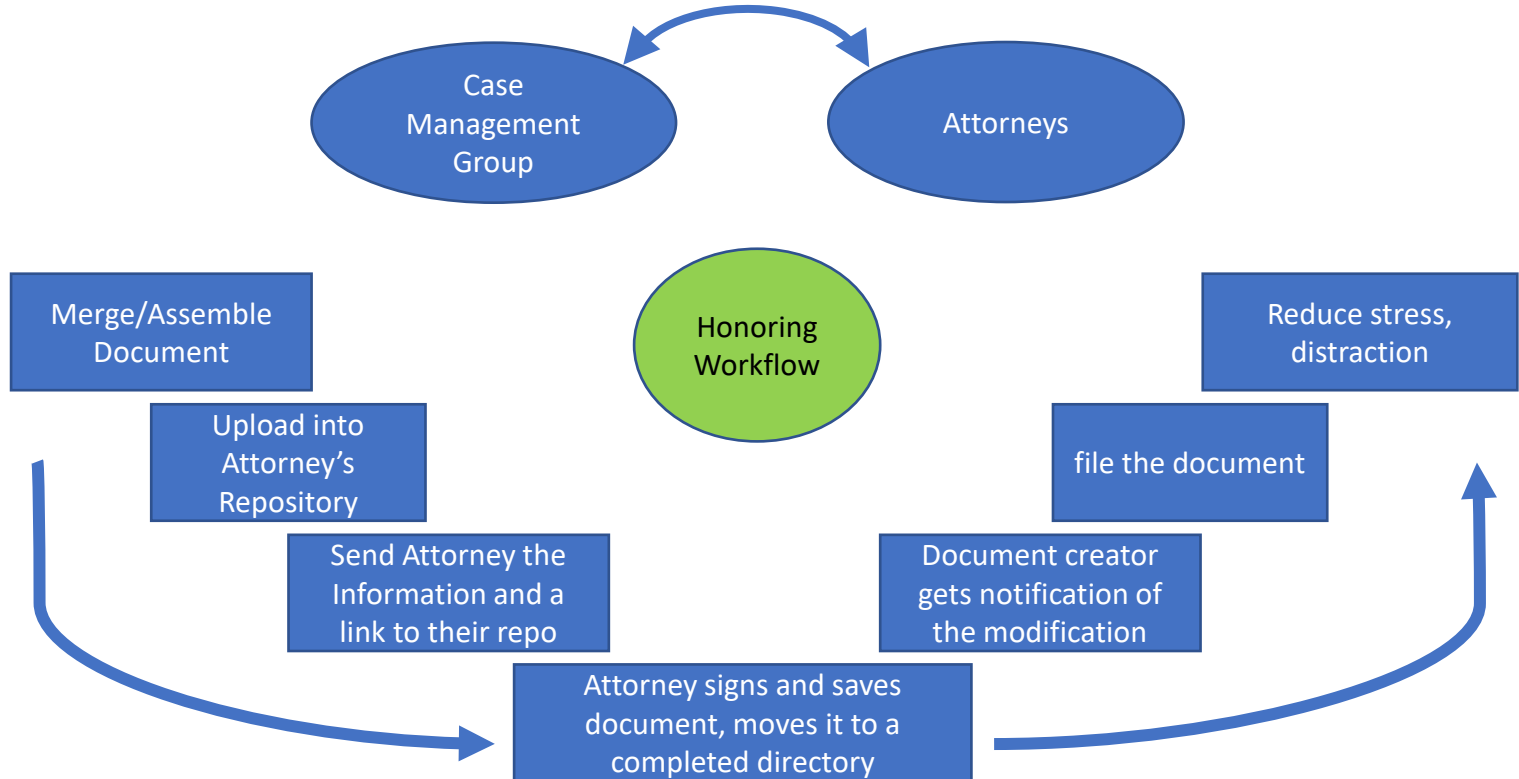

- Filing Metrics Dashboard (by client, by attorney, by country)
- Billing Dashboard
- Patent Budgeting Tools

Average No. of Office Actions
